

"How do I geocache?"

Step 1: Obtain a handheld GPS unit, and before beginning any tour, familiarize yourself with the operation instructions.

Step 2: Turn the GPS unit ON and wait for the unit to acquire a satellite signal.

Step 3: Once the unit has acquired a satellite signal, use the MENU feature to locate the section entitled COORDINATES. If your unit does not have this option then search the MENU for the section which will allow you to enter a new location in the form of numbered coordinates.

Step 4: Select your desired site from the brochure and enter the corresponding coordinates into your GPS unit. In this step, you can also log on to geocaching.com and get the coordinates there.

Step 5: If your GPS unit is Voice Led, you will receive instructions on where to travel. If not, follow the satellite picture on your GPS unit until you reach the destination point you entered through the coordinates (each GPS has a variety of arrows and symbols to lead you on your way).

Step 6: Once you arrive at the destination, use your GPS unit to get as close to the final coordinate location as possible. Remember, you still need to search for the St. Clements Geocache Box (most GPS units are accurate to within 10 feet— however, it may still take some time to find.)

Step 7: After you have found the cache, take a historic memory card for your collection, sign our logbook, and replace the cache as it appeared before you arrived so that everyone can have a chance to find it. Make sure to log your visit at geocaching.com so we know you found it!

If there are any problems with this geocaching tour or any of the geocaches, please contact the RM of St. Clements at stclementsheritage.com or make a comment in the log at geocaching.com.
